PROBLEM STATEMENT

Company : Winuall

In today's new normal, it's really impossible to go outside and explore opportunities to visit tutors and learn. There are millions of tutors who are unable to generate more revenue and are unable to utilise their full potential. On the other hand, students also are facing challenges due to not being able to learn from the tutor which would be a best fit for them. Building AI driven platforms (web/mobile) could be a great approach to connect students with relevant sets of tutors. (Please note that tutors are not limited to exam prep tutoring but stands still for vocational courses like music, dance, or coding as well).

Proposed Solution

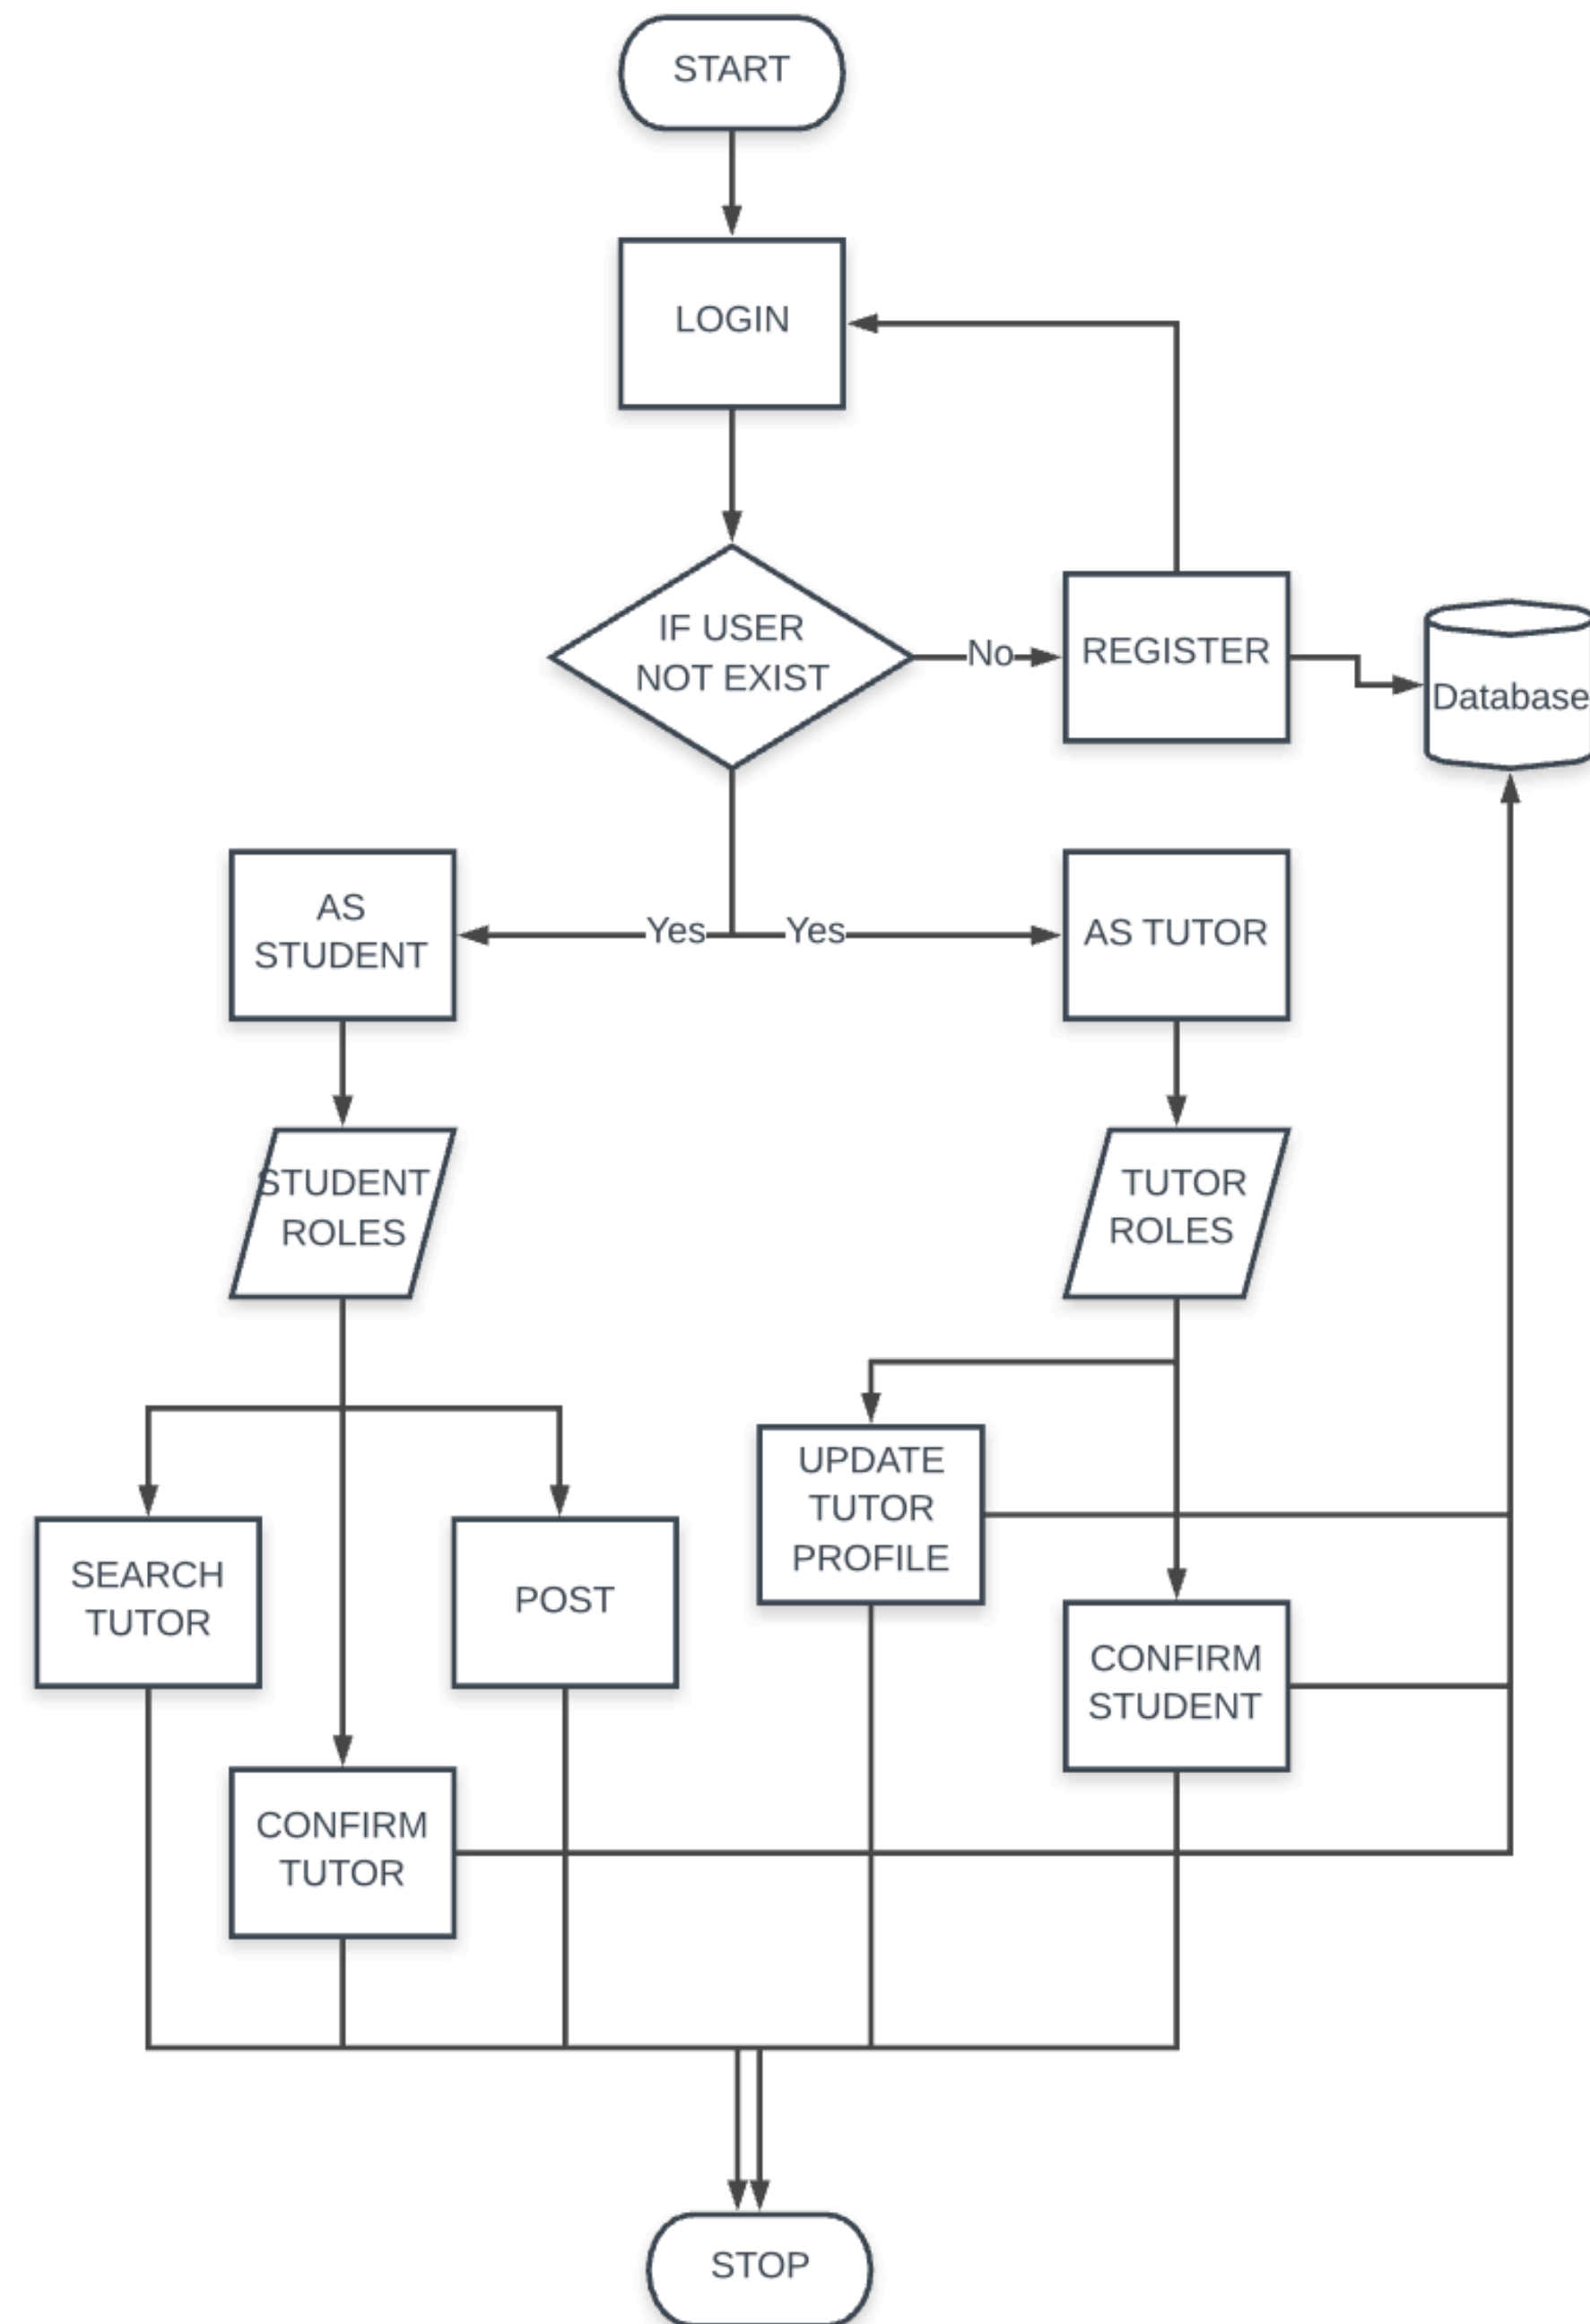

- We plan to create a user friendly platform such as a Website and Android App so that the tutors all over the world can meet the students and impart Wisdom.
- This project aims at bringing the student closer to the tutor. The student can choose his/her choice of tutor from the available tutor with easy and sophisticated filter which help in easy searching.
- The tutor and student have to mutually accept each other inorder to communicate each other.
- We have made both web and an android application to help the users choose their comfortable way of communicating.

Tech Stack

- PHP
- CSS/Bootstrap
- JavaScript
- Android Studio
- MySQL
- Hosting service (infinityfreeapp.com)

Future Scope

- This project can be extended by the use chatbots for 24/7 student help.
- There can be the implementation of chatrooms, where the students and the tutors can interact with each other, before and after mutual acceptance of each other.
- There can be even application of appointments, where the student can ask for a appointment from a tutor according to his/her free timings.
- There can be even online video conferencing which are just a click away.
- There could be a scope of quizzes where the tutors can put up and the students can easily attempt the quizzes.
- Etc, etc, etc

← **Flowchart**

Thank You :)
